

Connecting a growing sales team's **entire stack** into one automated system

How a US home-services installation company replaced manual data entry between its CRM, field-service software, payments and spreadsheets.

Industry Home services / installation

Teams Sales · Fulfillment · Support · Leadership

Scope Ongoing, since 2023

THE PROBLEM

The business ran on several tools that didn't talk to each other. Sales lived in GoHighLevel, jobs in Kickserv, records in Airtable, payments in Stripe and reporting in Google Sheets. The team was bridging the gaps by hand.

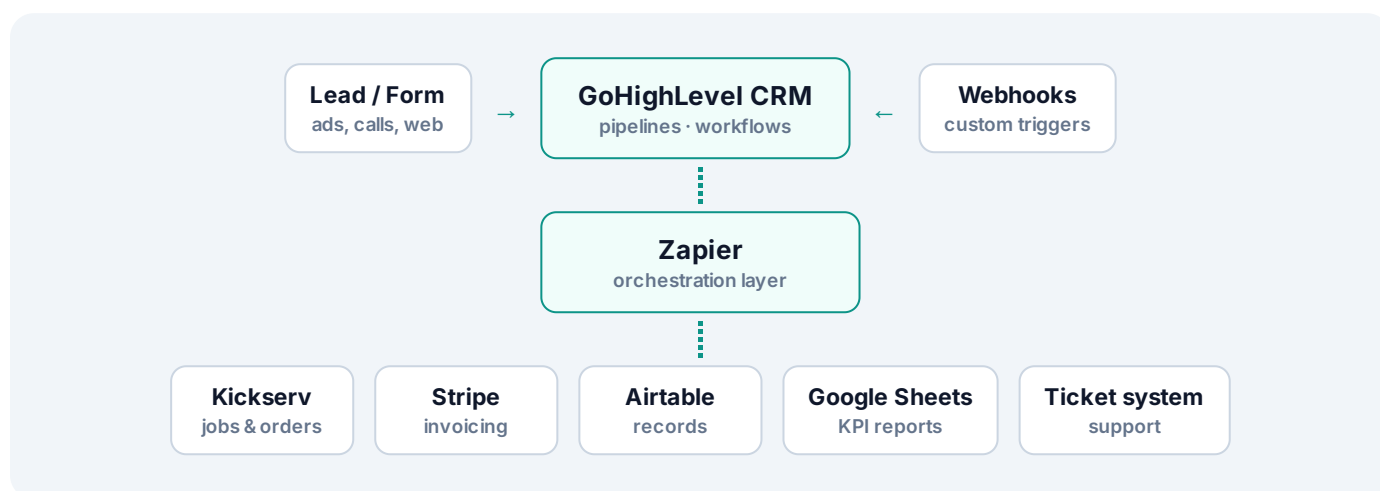

Leads assigned manually, with no clear view of rep performance

Orders and invoices re-typed between systems

Support requests scattered across email and chat

Leadership reports built by hand and often out of date

THE SYSTEM

WHAT I BUILT

01 Lead routing & rep tracking

Automatic lead assignment in GHL, with every contact record kept clean and each sale attributed to the right rep.

02 Order-to-invoice automation

Zapier workflows that carry an order from GHL into Kickserv, Airtable and Stripe with no re-typing.

03 Support ticket system

A full ticketing flow built on custom webhooks, Zapier and GHL: tickets created, tracked and routed to the team automatically.

04 Live KPI reporting

Dashboards for daily revenue by rep, 5-year sales trends, fulfillment and call-center performance.

THE RESULT

One source of truth

GHL, Kickserv, Airtable, Stripe and Sheets update in real time, so every team sees the same data.

No manual re-entry

Sales tracking, invoicing, order processing and tickets run on their own.

Reports leadership trusts

KPIs by rep and by day, always current, with no spreadsheet work on Monday morning.

HOW I WORK

1 Map the process

We go through the manual steps your team does today and decide what should happen automatically.

2 Build in your accounts

Everything is set up in your own GHL and Zapier accounts. You own it all, with no lock-in.

3 Test with real data

Each workflow is run end to end before delivery, including edge cases like duplicates and missing fields.

4 Hand over clearly

You get a walkthrough video and documentation so your team can use and maintain the system.

TOOLS I WORK WITH

GoHighLevel

Zapier

Webhooks

Stripe

Airtable

Google Sheets

Kickserv

Klaviyo

Email & SMS workflows

Google Analytics

Google Tag Manager

HTML / CSS / JS

ALSO DONE FOR OTHER CLIENTS

Since 2020 I've built Zapier + GoHighLevel automations for a marketing agency's clients, covering lead management, CRM processes, email campaigns and A/B-tested follow-up sequences. Before that I spent several years in SEO and marketing operations, so I build automations with the full funnel in mind.
