

Turning an agency's lead flow into automated follow-up that runs itself

How a digital marketing agency connected lead capture, CRM and email marketing across its clients using GoHighLevel and Zapier.

Industry Digital marketing agency

Work Automation · Email · CRM · Analytics

Scope Ongoing, since 2020

THE PROBLEM

The agency was growing and taking on more clients, but its marketing operations were mostly manual. Leads came in from several sources, follow-up depended on someone remembering to send it, and campaign results were hard to compare.

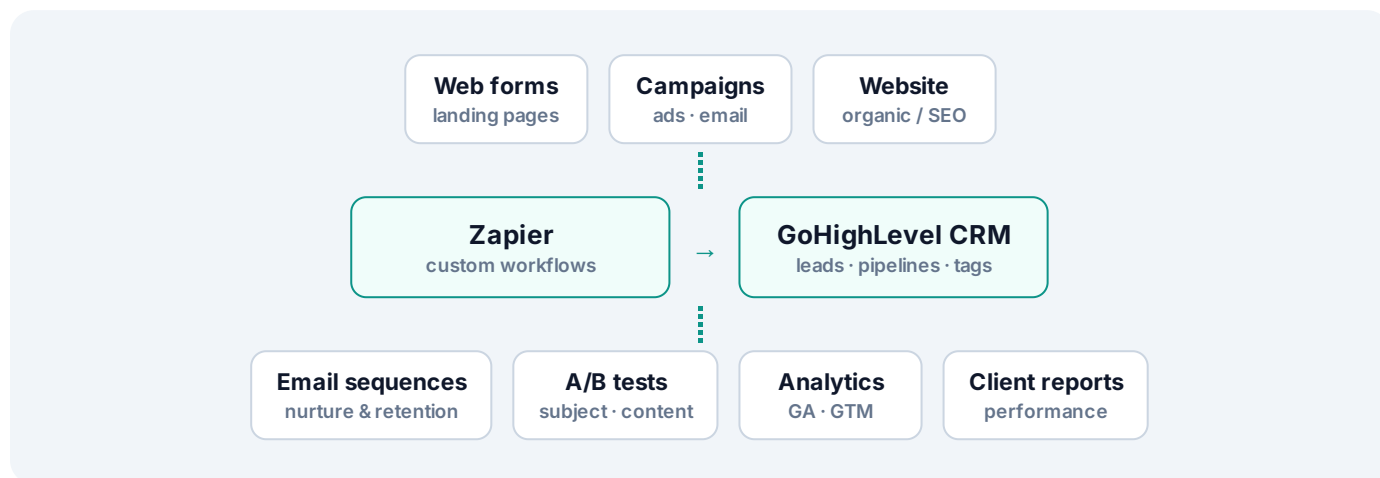

Leads from forms and campaigns copied into the CRM by hand

Follow-up emails sent manually and inconsistently

Campaign decisions based on guesses, not tests

New clients onboarded differently every time

THE SYSTEM

WHAT I BUILT

01 Lead capture to CRM

Custom Zapier workflows that send every new lead into GoHighLevel automatically, tagged by source and ready for follow-up.

02 Email automations

Targeted campaigns and automated sequences for nurturing new leads and keeping existing customers engaged.

03 Testing & optimization

A/B and multivariate tests on emails and campaigns, plus code edits to website and email templates.

04 Tracking & reporting

Analytics and tag setup to measure campaigns and site performance, with reports tied to business goals.

THE RESULT

Every lead followed up

New leads land in the CRM and enter a sequence automatically. None get forgotten.

Decisions based on data

Tests and tracking show which emails and campaigns actually perform.

Smoother onboarding

New clients go through a consistent process, which builds long relationships.

HOW I WORK

1 Map your funnel

We look at where leads come from and where follow-up breaks down today.

2 Build in your accounts

Workflows are set up in your own GHL and Zapier accounts. You own everything.

3 Test end to end

Every trigger, tag and email is checked with real submissions before delivery.

4 Hand over clearly

You get a walkthrough video so your team can run and adjust the system.

TOOLS I WORK WITH

GoHighLevel

Zapier

Email automation

Klaviyo

A/B testing

Google Analytics

Google Tag Manager

Google Search Console

SEMrush

WordPress

HTML / CSS / JS
